Subject: Wilcox Oil Company Superfund Site
Attachments: Residential Properties Sampled May 2015.pdf; 1956 Aerial with Current Residences provided by ODEQ.pdf; 1941.jpg

Barry/Suzanne, I am the new project manager for Wilcox, and I thought I would provide you with an update on the site. Todd Downham is the ODEQ project manager.

The two web links listed below provide you with some background information.

Site Status Summary: web link is: <http://www.epa.gov/region6/6sf/6sf-ok.htm>.

Oklahoma Web link is:

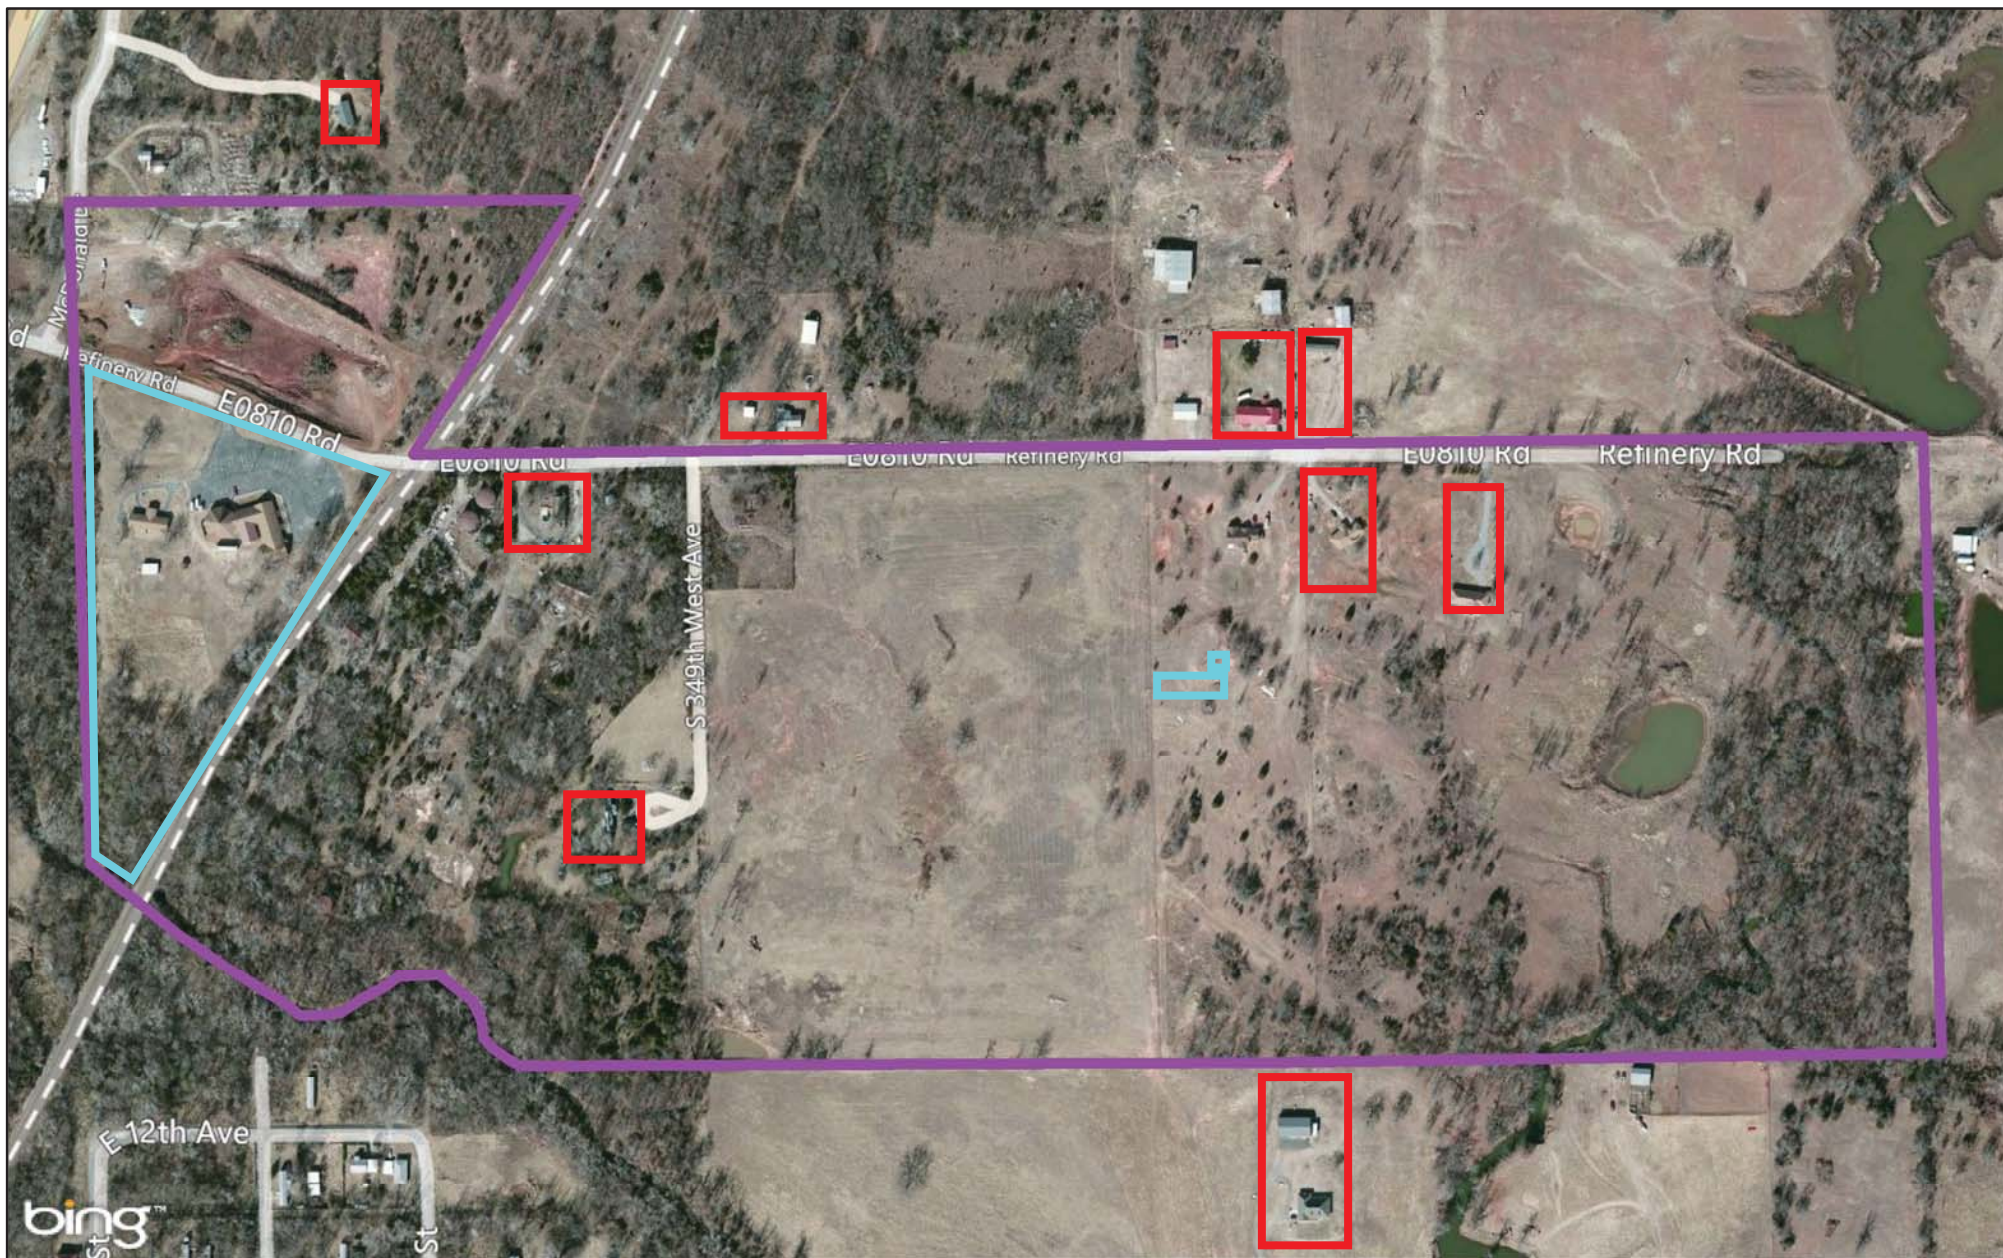

<http://www.deq.state.ok.us/lpdnew/SF/Superfund%20Project/SF%20Site%20Summaries/WilcoxRefinery.html>

Currently, the removal team is out in the field doing residential sampling (residential properties sampled may 2015.pdf). All of the red squares represent residential properties either within or near the site that are being sampled for metals, organics, pesticides, and PCBs. The blue represents new fencing removal will be installing. Also included for reference is a map the shows the home locations as they relate to historic operations in 1956 (1956 aerial with current residences provided by ODEQ.pdf). The earliest photo we have is 1941 (1941.jpg)

Contingent on funding, we are working with the EPA ERT team to complete some geophysical investigations followed by a direct sensing investigation. The geophysical investigation will include GPR, EM, and seismic, and will be scheduled late July/early August. The direct sensing investigations will be based on the findings of the geophysical investigation and will be coupled with geoprobe sampling, piezometer installation, and field testing. The direct sensing is tentatively scheduled for Nov/Dec. The long range plan is to use this information to develop a focused FSP and FS.

I was thinking that August may be a good time to some see the site while the team is out doing the geophysical work. Should these activities not take place, we can schedule another time for the site visit.
